

Maintenance of Brass Finishes

Please be advised that brass is a high maintenance metal. It tarnishes very quickly and must be cleaned regularly to maintain its original luster.

Polished brass should be cleaned with a liquid or cream cleaner with a soft cotton cloth, wiping in the direction of the rail, (do not use circular motions).

Satin or brushed brass should be cleaned with an abrasive pad, such as "scotch brite", using no cleaner, wipe in the direction of the rail.

When cleaning glass on or near the brass metal, do not use liquid or spray cleaners that will soak on to the brass, this will cause severe tarnishing that will take extra efforts to clean. We recommend cleaning the glass with a dampened cloth.

PRL furnishes brass products in their original high luster finishes. We are not responsible for maintenance of products once they have left our facility. We will not be responsible for damage to brass surfaces due to incorrect cleaning solutions or methods.
